Visa Status - Australian Permanent Resident

TECHNICAL SKILLS

Programming Languages: C# | Java (8+) | JavaScript (JS) | PHP | SQL (T-SQL / PL-SQL) | HTML | CSS

Azure Services: Functions | SQL database | Azure DevOps | Application Insights | Service Bus | Logic Apps

Computer Programs & Technologies: ASP.NET Core, React, Vue.js, MVC, Dynamics 365, MSSQL, Oracle Database, MySQL, MongoDB, Bootstrap, Struts 2, GitHub, Jira, Confluence, Microsoft Teams, Slack, cPanel, Plesk, WinSCP, PuTTY, Microsoft Office.

PROFESSIONAL EXPERIENCE

Software Engineer

October 2020 – Present

[TallyGroup, Melbourne, Australia](#)

- Lead and contribute to Agile software delivery through **daily stand-ups, sprint planning, reviews, and retrospectives**, ensuring consistent and high-quality sprint outcomes.
- Partner with Product Owners, Business Analysts, and Team Leads to translate complex business requirements into **scalable, maintainable technical solutions**.
- Design, develop, and maintain enterprise applications using **Microsoft Dynamics 365**, including CRM customisation, workflows, plugins, and entity relationship modelling.
- Play a key role in the continuous enhancement of **TallyIt Billing Software**, delivering new features, refactoring legacy components, and resolving production issues.
- Work across **multiple projects within the organisation**, contributing to both modern and legacy systems.
- Develop and maintain front-end applications using **React.js and Angular**, building responsive user interfaces with **HTML, CSS, and JavaScript**.
- Build and enhance backend services using **C#, .NET Core, and Java**, with strong use of **SQL** for data access, optimisation, and reporting.
- Deliver **new functionality every sprint**, consistently meeting deadlines while adhering to coding standards and best practices.
- Reduce production defects by approximately **30%** through proactive bug fixing, root cause analysis, and improved testing strategies.
- Improve application performance and reliability by optimising backend processes and **SQL queries**, resulting in faster response times and improved system stability.
- Contribute across the full SDLC including **solution design, development, code reviews, testing, deployment, and production support**.
- Utilise **Azure Services** for cloud-based deployment, configuration, monitoring, and application support.
- Design, maintain, and support **Azure DevOps CI/CD pipelines**, automating build, test, and deployment processes to improve release reliability and reduce manual effort.
- Mentor junior developers through code reviews, technical guidance, and knowledge sharing, helping uplift overall team capability.
- Successfully delivered **4 end-to-end projects** and continues to contribute to the long-term development of business-critical platforms.

Freelance Software Developer

March 2019 – October 2020

Melbourne and Sydney, Australia

- **DConnect** - CRM based web application with sending Email Campaign, Data Record and Data Integration features. Applications help in making a marketing journey and send emails with the help of CRON jobs based on their status. This product is developed in PHP, HTML, CSS, JavaScript, and MySQL as a Database. With API integration of SendGrid for mails.
- **DManage** - This project involved integration of all three i.e., HR management solutions, employee onboarding, Time clock and rostering system based on the roles of the User. It is developed using ASP.Net Core (MVC Framework), React, HTML, CSS and MySQL as Database.
- **DCovid** - COVID Safe Web App used to record people visiting a place so that they can be tracked in case of an outbreak. People data being recorded and maintained considering all GDPR policy. This web app is built using PHP, HTML, CSS, JavaScript, and MySQL as a Database.

Front End Developer Intern (Unpaid)

April 2020 - September 2020

[CyQIQ, Melbourne, Australia](#)

- Daily scrum, Wrap-up meetings and a Weekly Scrum meeting which takes place once in a week.
- Reported to the manager on the daily basis regarding the progress of the task assigned.
- Working on the **Website re-development** of CyQIQ with an **agile approach** with passion for completing all the tasks on priority basis mentioned in product backlog.
- Technologies learned: **WordPress, HTML, CSS, JavaScript, React, ASP.Net Core.**
- Was **involved in two different projects** in my tenure.
- Working as a **Full stack Developer** more than a soul Front End Developer. This helps me improve my knowledge and experience all-round from development to deployment and support.
- Working in a **team of 4 developers** with everyone primarily focusing on different goals to work collectively in a team and efficiently release the website for the stakeholders before the deadline.

Software Engineer

August 2016 - December 2017

[In-Solutions Global Pvt Ltd., Mumbai, India](#)

- Managed **6 different Banking domain projects**. With **Client Onsite visit** and **problem-solving experience** as well.
- Worked on **4 live projects** and made **2 projects live** during my tenure. My job roles include **designing, coding, testing, configure, support** and **documenting** all the steps taken in the process to develop and deliver the application.
- Check and supervise day-to-day reports and **manage different transactions**. Developed a system using the **stored procedures**, some **automated script** that operates on a particular time in the day, **functions in the database** and various **ETL operations** to perform various tasks. **Co-ordination** with the UX/UI developers to maintain the design of the application.
- **Effectively communicated** with the project manager, operations, clients and other project teams about project progress, development, activities, and goals.
- Completed daily report cross verification which is generated from the operations team and giving a go-ahead to the team.
- Reported to the project manager on a day-to-day basis.
- **Achievement** – Successfully developed the requirements coming on a daily basis in the live projects and made 2 projects go live and delivered the project before the timeline.

UNIVERSITY PROJECTS

iContinu Donation Web application

Developed and delivered an MVP donation website, handling frontend development, database design, and partial backend implementation using Vue.js, .NET Core, MySQL, and AWS EC2, achieving a High Distinction.

Application Server Load Balancer

Designed and implemented an application server load balancer on Ubuntu using Apache to intelligently distribute incoming traffic across servers, ensuring high availability and optimal performance; awarded Best Final Year Project.

EDUCATION

Professional Year

March 2021 – March 2022

[Performance Education, Melbourne, Australia](#)

Key Learnings: Accelerating Interview Success (AIS), Professional Workplace Communication (PWC), Internship Preparation (IP), Australian Job Search Skills (AJS).

Achievements – Successfully completed all the courses in a timely manner.

Master of Information Technology

February 2018 – December 2019

[Royal Melbourne Institute of Technology University, Melbourne, Australia](#)

Key Learnings: Software and System Architecture and its Design and implementation, MVC Models, Agile SCRUM Methodology, Cloud Security, Secure E-Commerce, Database Concepts, Big Data Processing, IT Infrastructure and Security, Project Management, Algorithm and Analysis.

Achievements – Finished master's with Distinction and Secured High Distinction (HD) in Final Year Project.

Bachelor of Computer Engineering

June 2012 – June 2016

[University of Mumbai, India](#)

Key Learnings: OOPS Concepts and its methodology, Cryptography and System Security, Artificial Intelligence, Data Warehouse and Mining, Data Structure, Distributed Database, Computer graphics, Operating systems, Web development, Software Engineering.

Achievements – Presented 2 technical papers at national level organized by IETE and 1 CSI paper organized by CSI in our university.

PERSONAL ATTRIBUTES

- **Communication Skill** - I effectively collaborated with cross-functional teams, delivered presentations and effectively communicated technical concepts to non-technical stakeholders, translating complex technical concepts into clear, Authored clear, and concise documentation for software projects during my tenure as software developer.
- **Problem-Solving attitude** – During my tenure as software developer, I was able to find and define problems, analyze problems to find causes, evaluate possible and quality solutions, consider the possible outcomes of each solution, decide on the best solution, and implement it. All the solutions provided sound judgmental to the seniors and customers.
- **Collaborator** – As a student or software developer, I have always worked effectively in a team, contributed to team goals, communicated effectively with team members, respect, listen to, and encourage team members, pitch in, put the success of the team ahead of individual success.
